

Kevin Spillane

Kevin Spillane has a Master of Public Administration from Syracuse University and has planned, developed, and managed several local solid waste programs over the last seventeen years. He has worked as a general manager of a 1000 ton per day landfill and a 75 ton per day recycling facility in Ontario County, New York, and has over a decade of experience in developing, constructing, permitting, and operating gas control systems. He has also contributed to the development of waste to energy projects including the selection of a private developer that is generating electricity at the Ontario County Landfill.

Mr. Spillane is currently employed by Stearns & Wheler, an engineering firm, as a project planner. He has been working with several municipalities in New York State to find developers for their gas to energy projects. Most recently he has been working with the Development Authority of the North Country to draft an RFP, solicit proposals from private developers that will utilize their landfill gas, and then use this project to leverage economic development of the Adirondack region of New York State, one of the Authority's main missions. Mr. Spillane has also provided a similar presentation on this topic to the Air & Waste Management Association Niagara Frontier Section last April.
